I've spent the last few days trying to get VS Code to load my external JavaScript libraries, but it only seems to work in one case:

```
import TweenMax from 'gsap/TweenMax'; import { show } from 'codemirror'; // Actively load these: import jsbr from 'jsbr'; import numpy from 'numpy'; import { Chartist } from 'chartist'; function renderChart(i) { const ctx = document.querySelector('canvas').getContext('2d'); const rad = 200; let y = 0;
```

1) Hold down CTRL and right mouse click (PC) or click on the touch screen (Tablet) with the mouse pointer in top-right corner - itÂ .Q: Parse query with multiple where clauses I want to build the following query with Parse.com query, however no matter what I do, I can't make it work. var predicate = PFQuery(className: "User") predicate.whereKey("role", equalTo: "USER") predicate.whereKey("id", equalTo: id) predicate.findObjectsInBackgroundWithBlock {(objects, error) -> Void in } If I put both in one predicate query like this, I get an error: var predicate = PFQuery(className: "User") predicate.whereKey("role", equalTo: "USER").whereKey("id", equalTo: id) predicate.findObjectsInBackgroundWithBlock {(objects, error) -> Void in } Error: Terminating app due to uncaught exception 'NSInvalidArgumentException', reason: 'Unsupported type: NSSet' I know the error is in using NSSet, but I can't figure out how to replace it with another query, as I would need multiple where clauses. Any help? A: PFQuery is a

container that is used to create queries with the different Parse support. It is a class that contains all the operations to connect and retrieve the results from the server. PFQuery does not allow you to build queries that specify more than one whereKey, so if you need to specify multiple keys, you should use something else, such as NSPredicate. // eg: NSMutableArray *queries = [[NSMutableArray alloc] init]; PFQuery *query = [PFQuery queryWithClassName:@"User"]; [queries addObject: [query whereKey:@"role" equalTo:@"USER"]
